SUCKER ROD WRENCHES

Rod Buster

The PARVEEN Rod Buster Sucker Rod Wrench is made of high-grade alloy steel, hardened to resist wear. This lightweight (6lb.) rugged tool is excellent for manual makeup and breakout of sucker rod joints. It features a counterbalanced grip to reduce fatigue. The cross-section of the handle is oval, which provides a natural resistance to the wrench spinning when gripped. The head is spring-loaded and a hardened steel bushing is provided between the wrench head and handle.

Spin Wrench

The PARVEEN Wrench is a one-piece tool manufactured from high tensile strength alloy steel. The wrench opening fits the square on sucker rods and is accurately machined to reduce user fatigue.

Rod Guides

PARVEEN advanced rod guide designed to remove paraffin and act as centralizer to minimize wear on both tubing and rod couplings. PARVEEN engineers continually develop new rod guide materials and designs to aid in well site productivity. The combinations of PARVEEN rod guides provide the benefits of wear distribution and paraffin removal.

Rod Lubricator

PARVEEN polished rod lubricator is designed for use on problem wells which either pump-off or flow-off. With a capacity of 1 quart the lubricator features a felt wick that lubricates the polished rod by applying oil on both the up and down strokes.
